

## PREP : pre exposure prophylaxis

Preventive treatment **to protect against HIV**.  
The treatment is Truvada.

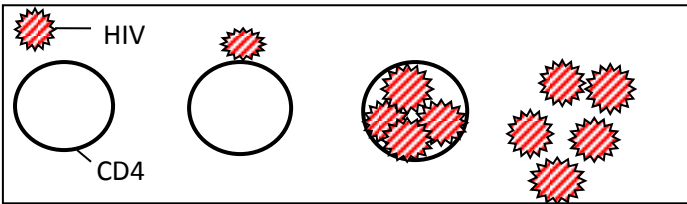

It does not protect against other sexually transmitted infections.

Inform all the doctors you take the Prep.

### The Hiv :

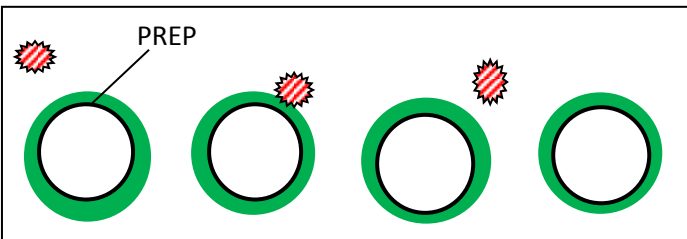

In our body the HIV attaches to the CD4 cells, enters and then multiplies. The HIV grows and the CD4 cells dies.

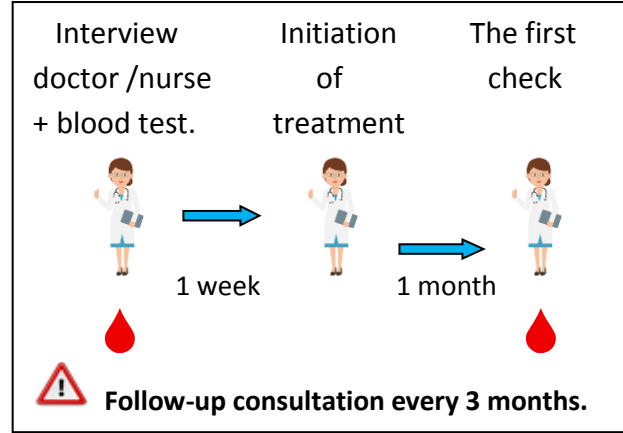

The CD4 protect us from the diseases.

### The action of thePrep :

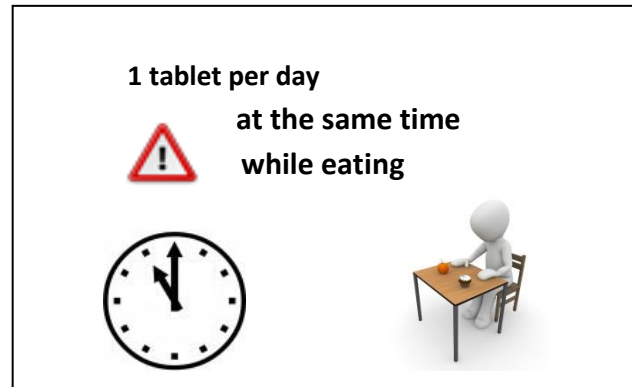

With the PREP, the HIVnot be able to multiply in our body and to settle there. He disappears.

### Treatment :

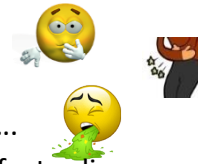

### How to take the Prep :

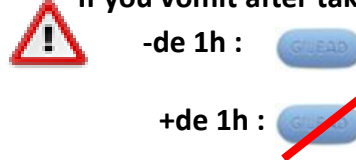

### Adverse effects :

Vomiting, diarrhea, nausea, abdominal pain, itch, tired, ....

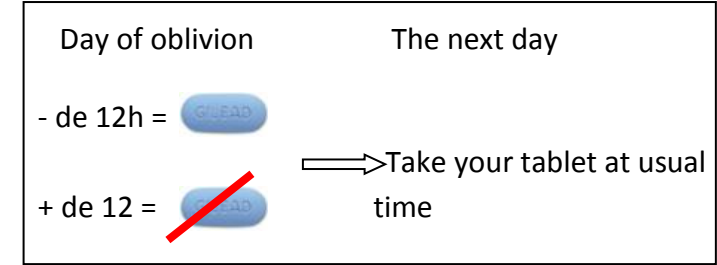

Do not panic ! these effects disappear after a few weeks.

### If you vomit after taking the Prep :

### What happens if you forget the Prep ?

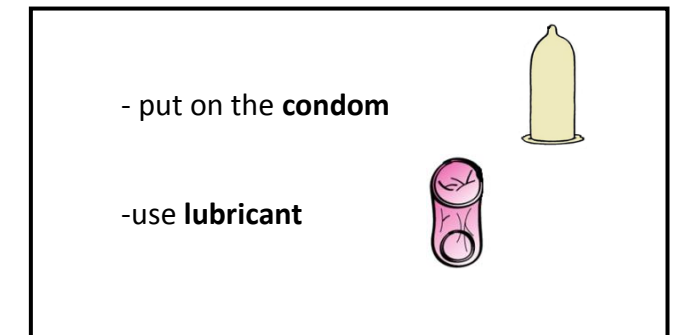

The effectiveness of the Prep decreases if you forget it.

Put on alarm on your phone.  
Always take one with you.

You must continue to do :
